

Xamarin Forms – Day 5

Project description

In this project, you are to complete your MovieSearch Xamarin.Forms app by improving usability and making it delightful.

1. The Top Rated List and Popular Lists should appear instantly when you click on their tab, i.e. they should be preloaded at startup.
2. The user should be able to refresh the lists by doing pull-to-refresh. See [https://developer.xamarin.com/guides/xamarin-forms/user-interface/listview/interactivity/#Pull to Refresh](https://developer.xamarin.com/guides/xamarin-forms/user-interface/listview/interactivity/#Pull%20to%20Refresh).
3. The search bar should display the search-results on the same main page below the search field, rather than navigating to a new page. Use SearchBar rather than Entry for the search. See <https://developer.xamarin.com/api/type/Xamarin.Forms.SearchBar/>

Notes

- As before a spinner should be shown whenever a view is being loaded on any of the pages.
- We expect you to implement items numbered 1 and 2 above. Item 3 (the search bar and corresponding functionality change) is a bonus point when we calculate your final course grade.
